## EIMA INTERNATIONAL 2016 BOLOGNA > IT

 **COMET**

BOLOGNA ITALY

# EIMA 2016, agriculture day

*A record number of public at the Bologna Exhibition and at the Comet stand*

**The internationalisation process of the Bologna exhibition is consecrated, registering a record number of foreign delegations**

EIMA International has been confirmed as the focal point this year too for international agricultural mechanisation, closing this forty second edition with a record number of visitors.

This great event – organised by the Italian Federation of FederUnacoma constructors – was also a “festival” for the world of agriculture and of motors, with important repercussions also at a media and social network levels. The 2016 edition will be remembered mostly for the large number of foreign delegations, a massive 80, from the five continents. For the very first time delegations from Jordan,

Kenya, Mozambique and Palestine visited Eima but the most numerous were from Argentina, Brazil, Chile, Iran and Peru.

“This edition gloriously closes the EIMA International cycle, set up in the Bologna Fair district,” declared the President of FederUnacoma, Massimo Goldoni – “and sends us into a future where the Exhibition will change its appearance thanks to ongoing restructuring works of the Fair district itself provided for by BolognaFiere. Fair grounds that are being transformed to better accommodate an exhibition that finds itself at the global peak in this sector and that knows how to captivate companies and operators like no other”.

## EIMA 2016 numbers

Record numbers this year too for EIMA International.

The Bologna event saw more than 44,000 foreign operators from 140 countries pass through its doors, up by an amazing 18% compared to the previous edition. The 1,900 exhibiting companies were highly popular with the public which responded with 21% more visitors (285,000 against 235,000 in 2014).

**285.000 visitors +21%**

**44.000 foreign operators +18%**

**1.900 exhibiting companies**

## BOLOGNA ITALY

### Comet's keyword for EIMA 2016 was INNOVATION

What Comet's futuristic stand did was to underline the central role it plays for all those companies wanting to look to the future, aiming at component innovation and research. Its circular shape was an obvious choice to forcibly communicate the synergy between the Agriculture, Cleaning and Industry divisions, joined together in pursuing continuous research for 100% Italian quality and excellence, thus representing the best choice for all companies looking to distinguish themselves on the international scene.

## The main target is attention to the customer

Attention to the customer is a must for Comet. Which is why the stand portrayed one outdoor setting, displaying the range of products, and one indoor setting dedicated entirely to welcoming visitors and business relations where it was possible to talk to the customers privately, guaranteeing a peaceful environment to discuss business while drinking a good cup of coffee.

In this edition of Eima, Comet was on a stand of the Emak group, among other brands, in pavilion 18 where the focus was on presenting the whole range of components, spare parts and accessories for those working in the agricultural world.

The slogan "With our forces you will gain ground" called to mind the benefits for retailers in the sector resulting from the partnership with an international corporation the likes of Emak Group.

*New products for all Comet divisions*

## Efficiency comes face to face with Quality

### **BPS Series: the new BPS 160 completes the range of low pressure pumps with 3 to 6 diaphragms.**

The BPS line boasts a set of excellent features that are unparalleled in the market:

extremely compact size, easy maintenance, long lasting and resistance to the most heavy working conditions, whilst always maintaining high performance in terms of flow rate, priming capacity, power absorption and low noise.

With the addition of the new BPS 160, the BPS range now includes 4 pumps with a maximum pressure of 20 bar and flow rates of 160, 200, 250 and 300 l/min and is designed to equip the most modern and high performance machines with boom sprayers.

### **KP and KP PRO: Compact, electric, hot water high pressure cleaners for professional use.**

- 15 l. fuel tank, with level floater and fill up filter.
- Regulated low-pressure detergent suction.
- Motor thermal protection
- Timed Total Stop
- Easy-Start on single-phase models
- Boiler protection safety valve
- Rotary On-Off switch
- Temperature setting thermostat
- Amperometric control (on three-phase models)
- Motor rotation control (on three-phase models)
- Phase control (on three-phase models)
- "No fuel" indicator
- Semi-professional heavy duty (versions with 2-pole motor)
- Suitable for professional use (versions with 4-pole motor)

EIMA was the ideal place to spread the word about all the new Comet products.

The new low pressure pumps in the BPS series were the stars of the Agriculture Division but especially the latest addition BPS 160. Great emphasis was also given to the new control units with calibrators which are of paramount importance when spraying to ensure constant pressure.

The Cleaning Division proposed the new KP, a professional, hot water high pressure cleaner that is at the top of its range in terms of performance and design. Rounding off, the flagship of the new products in the Industry Division is the H Series, that is, the new series of very high pressure pumps (up to 2800 bar) that combine power, effectiveness and elegance of design all in one.

### Pump control units with calibrators.

Each time one or more of the bar sections are closed when spraying, it is only natural that pressure is greater in those sections that are still open. Likewise, pressure drops if a section that was first closed is now opened. If treatment is to be optimum pressure should be as constant as possible (under the same conditions).

To be sure you are working correctly under all conditions, Comet is proposing ORION-C and HPR-C, two new Control Units fitted with calibrators usable on diaphragm pumps up to 50 bar. Comet also presents its 3-Way Distributor Unit GD3-C that can be integrated with the control units already on the machine, its job being to offset pressure without having to replace the complete unit.

### H-Series: the new very high pressure pumps up to 2,800 bar.

Series H is the flagship of the HPP Brand. This range includes horizontally and vertically configured piston pumps that can reach pressures of up to 2800 bar.

Built according to cutting edge technologies, the result of continuous research and the use of top quality materials, the pumps in the H Series have a multitude of applications.

They are ideally employed in systems for maintenance in the mining sector, for treating surfaces, sandblasting and water-jetting.

But they have many other possibilities of use, also in the heavy industry, iron and steel industry, mineral oil refining, agri-foodstuffs industry, construction and in airport maintenance.

Mounted on special robots, they are also used for hydrodemolition and cold cutting of metal surfaces.
